## Impervious Surface Calculation Sheet

All permit applications for building additions, sheds, pools, patios or other accessor structures must be accompanied by a plot plan indicating all structures and impervious surfaces that exist on the property.

**Impervious surfaces** are those surfaces which do not absorb rain. All buildings, parking areas, driveways, roads, sidewalks and any areas in concrete, asphalt and packed stone shall be considered impervious surfaces within this definition. In addition, other areas determined by the municipal engineer to be impervious within the meaning of this definition will also be classed as impervious surfaces.

**Impervious surface ratio** is a measure of the intensity of use of a piece of land. It is measured by dividing the total area of all impervious surfaces within the site by the base site area.
